MAKE BUILDING SAFER

Adopt internationally accepted aluminum alloy profiles

T5-T6 6063 A00

High strength/Resistant to fission/Excellent performance
Soundproof and quiet

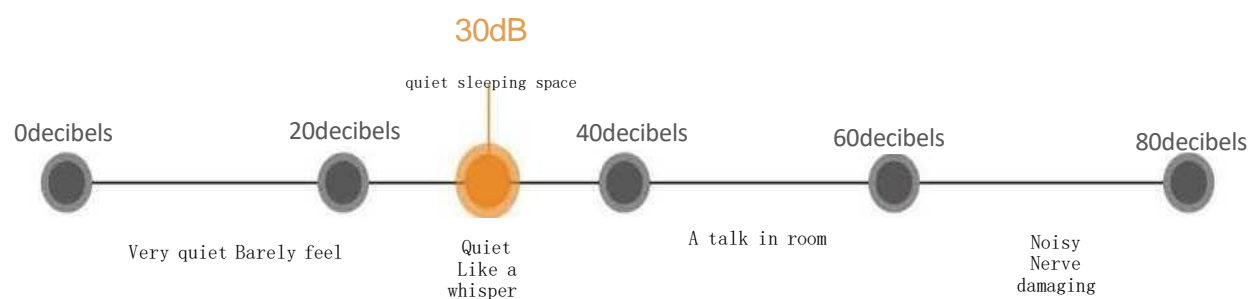

soundproof and quiet
 enjoy the warmth of home with multi-layer tempered glass

We are different

Reduce noise decibels
 Improve indoor environment

30DB

System-level overall solution

The material is different.

6063-T6 high standard and high precision aluminum profile. Aluminum profiles with high strength, good hardness, good mechanical properties, toughness and corrosion resistance

The hardware is different.

We use high-end hardware fittings brands for all door and window hardware fittings, supporting mute locking bars, high load-bearing hardware, to ensure the durability and beauty of the hardware fittings.

The structure is different

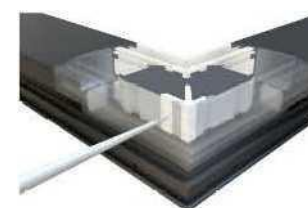

Adopting multi-channel anti-leakage process, "plugging" and "dredging" dual-channel protection, the water-tightness of the window, to protect the use of peace of mind in inclement weather.

1. The structural splicing parts are treated with waterproofing;
2. Multi-layer sealing structure between window sash and frame;
3. Concealed drainage design.

Hollow profile is different

3+2 process - air anti-fog technology (three-layer seal: imported butyl adhesive, high viscosity AB mixed adhesive, curtain wall silicone neutral adhesive: double layer protection: hollow filled with chlorine gas, spacing aluminum strip filled with 3A moisture-proof beads)

The glue is different.

adopting polyurethane Mixed neutral adhesive, the tensile strength and weather resistance of this adhesive are not reduced at all under the environment of -30 ° -50 ° . to improve the strength of the corner and ensure the stability of the frame.

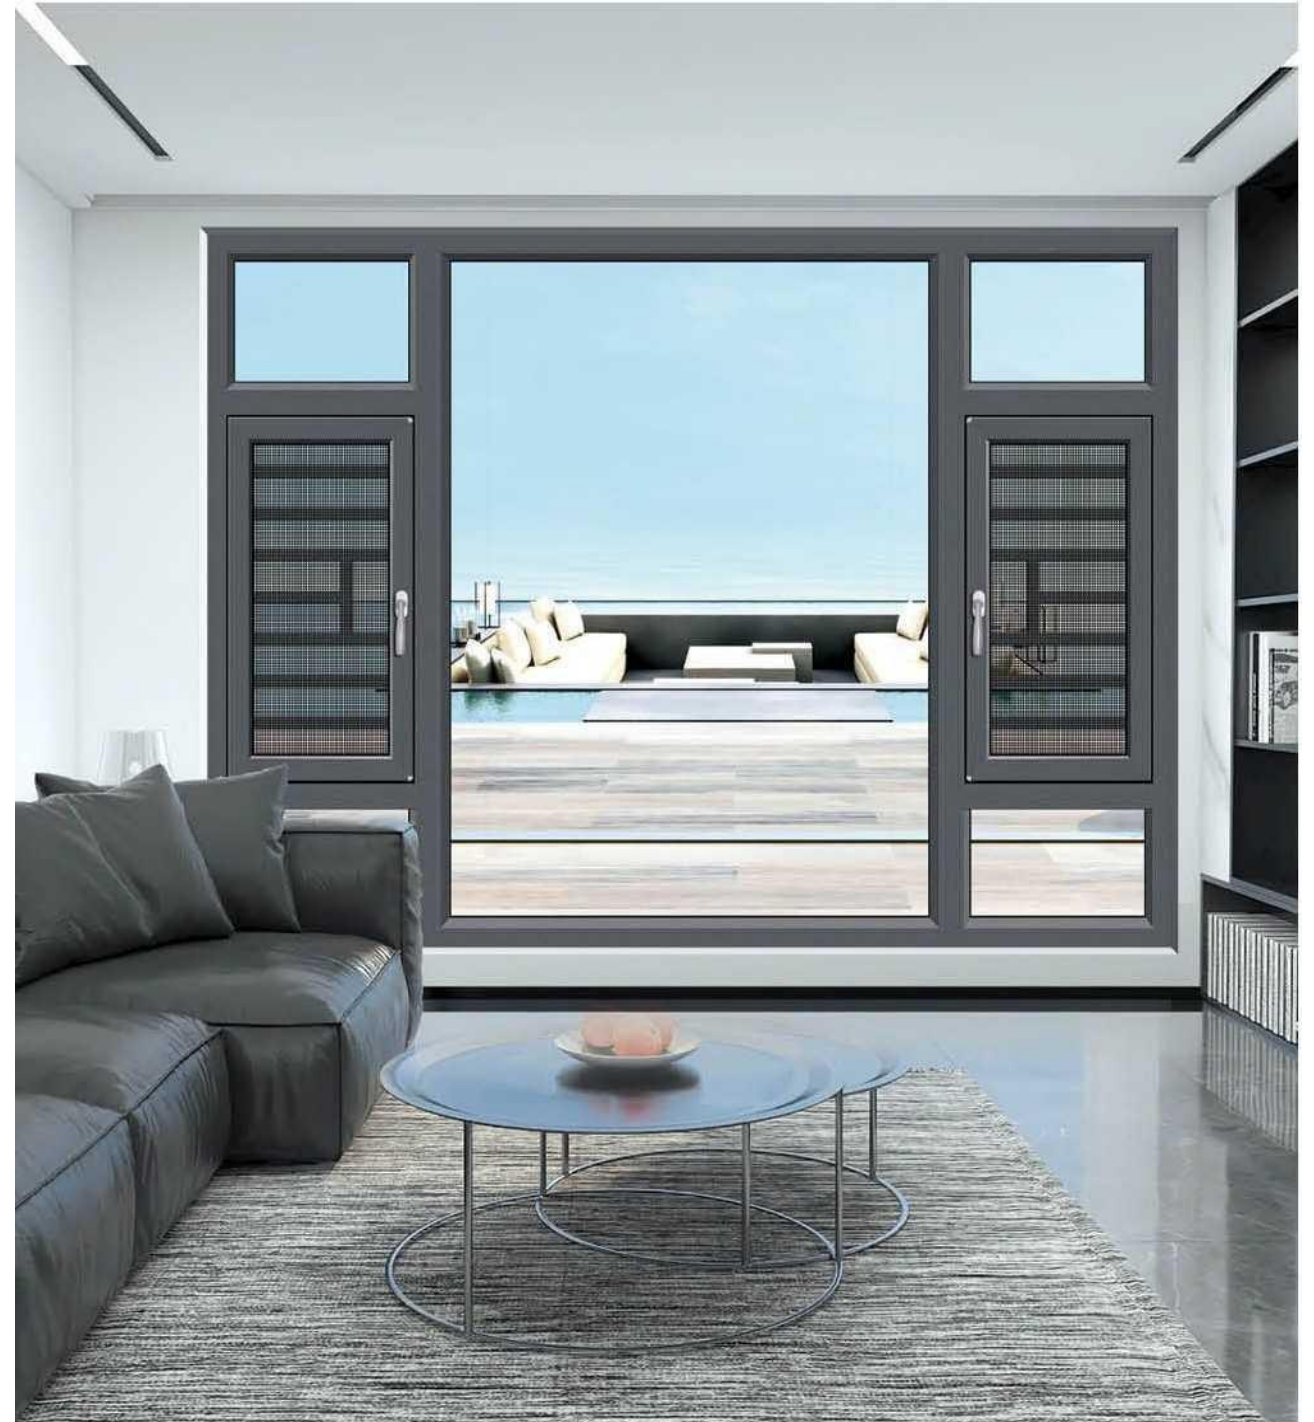

Ingenious structural design

superior performance

Heat insulation

Thermal insulation, comfortable like spring

Know beauty by simplicity
Know your heart by quietness

Creative raw material, the outline of an imaginative space for dreaming
